SUMMARY

Senior Product Designer with 4+ years taking AI products zero-to-one at Naya Studio, a B2B AI-SaaS startup based in Brooklyn, NYC. AI-native, end-to-end workflow: frame in Figma, prototype in working code with Claude, hand off through GitHub and Vercel — cutting design time ~50% on rapid prototyping and the time developers need to understand major-feature handoffs by 40–50%. 200+ features shipped across agentic AI, core product, design systems and monetisation.

EXPERIENCE

Senior Product Designer — Naya Studio, Remote

Jun 2023 – Present

- Shipped 19 high-impact features in 2024 — before adopting the AI workflow — contributing to a 40% NPS improvement within one year.
- Adapted fast to the 2026 AI shift:** learned a Claude-first design workflow in weeks — divergent directions explored as working code prototypes with real states, motion and micro-interactions instead of static mocks — cutting design time on rapid prototyping by ~50%.
- Rebuilt design→dev handoff** around GitHub and Vercel: plug-and-play, click-through prototypes reduced the time engineers need to understand major features by 40–50%.
- Designed 30 features in Apr–May 2026 (20 released to users, 10+ build-ready) at sustained quality.
- Own flagship **agentic AI** end to end: AI Workflow Builder (template-first, progressive disclosure so teams trust and reuse AI workflows) and Estimation AI (explainability-first human-AI interaction — every AI output auditable, full state design).
- Designed **Group Sharing & Nested Groups** (web + mobile): built the permission-inheritance logic with live previews of who gains access, and replaced person-by-person invites with 1-click bulk sharing to entire nested orgs — collapsing 10s of manual shares into a single action.
- Redesigned Projects & Homebase, the surface every user lands on daily, from a wall of competing actions to a clear next step.
- Built and own the **design system**: created primitives and tokens with the dev team in Storybook, mirrored between Figma and code — design and dev stay in sync, and AI-assisted prototyping is on-brand by default.
- Designed Subscriptions, Teams & Stripe monetisation UX; evaluated 3,000+ user insights to drive iterative improvement.
- Beyond design:** shape roadmap prioritisation and product strategy with founders; ran influencer partnerships (100+ profiles researched across 10 industries; landed a collaboration with Reid Schlegel); own content end to end — motion graphics, video editing, AI voice-overs and copywriting, incl. Onshape App Store marketing.

Product Designer — Naya Studio, Remote

Jun 2022 – Jun 2023

- Implemented responsive designs across platforms; built reusable style guides and UI components that seeded the later design system.
- Improved usability through user research and shipped iterations; contributed to the 40% NPS improvement.
- Promoted to Senior Product Designer after one year.

Graphic Design Intern — Vruksh Ecosystem, Nagpur

Jan 2021 – Aug 2021

- Created logos, illustration and typography for the growth team, increasing user engagement by 60%; built infographics for complex data.

INDEPENDENT TOOLS — DESIGNED & BUILT SOLO

- Yoink** — Chrome extension that pastes any website into Figma as fully editable layers; actively used by designers.
- Email Signature Generator** — replaced a 3-week, 3-person manual process with a self-serve tool built end to end.
- QR Code Builder** — on-brand QR codes, self-serve for the whole company.

SKILLS

Craft — End-to-end product design · UI & interaction design · Design systems · Motion & micro-interactions · Responsive design · Storytelling

AI-native workflow — Agentic UX · Human-AI interaction · Rapid prototyping in code with Claude · Figma · React · GitHub · Vercel · Design-to-dev handoff

Product & growth — Zero-to-one · PRDs · User & competitive research · Cross-functional collaboration · Stakeholder alignment · Copywriting · Video & motion graphics

EDUCATION

B.Tech, Computer Science — MGM's Jawaharlal Nehru Engineering College, India · 2017 – 2021

LANGUAGES

English · Hindi · Marathi
